

EXECUSUITE AI

ExecuSuite AI

Work smarter. Plan better. Communicate effortlessly.

An integrated AI-powered workplace productivity platform — project preview, features, tools, and setup

ExecuMail

ExecuRizer

ExecuPlanner

Project Overview

Professionals lose hours to repetitive work — ExecuSuite AI brings it together in one platform.

The Problem

- Writing and rewriting emails
- Taking and organizing meeting notes
- Identifying meeting action items
- Planning daily workloads
- Prioritizing urgent tasks
- Remembering deadlines and appointments

The Solution

- Generate professional emails with AI
- Summarize meetings & extract action items
- Turn action items into planner tasks
- Ask AI to prioritize tasks
- Generate a daily schedule with AI
- Track everything from one dashboard

Goal: demonstrate how AI integrates into a practical workplace application — not isolated AI tools.

Three Tools, One Platform

ExecuSuite AI combines three connected AI productivity modules.

ExecuMail

AI email generation and scheduling — draft, tone, and send on time.

ExecuRizer

Meeting transcription, summarization, and action-item extraction.

ExecuPlanner

AI task planning, prioritization, scheduling, and reminders.

Project Type

AI-Powered Workplace Productivity SaaS

Built With

Bolt.new · React · TypeScript

The Dashboard

A central overview of the user's productivity across every module.

Emails Generated &
Scheduled

Meetings Processed &
Summarized

Tasks Completed

Upcoming Deadlines &
Today's Schedule

Quick Actions

Generate an email

Start a meeting transcription

Create a task

Plan the day with AI

Also included: notifications for reminders and activity across all modules.

ExecuMail

AI-powered professional email generator and scheduler

Features

- Generate professional emails
- Select tone and length
- Enter recipient & purpose/context
- Generate subject and body
- Edit and regenerate responses
- Copy content & save drafts
- Schedule emails for later
- Set reminders before send
- View & cancel scheduled emails

Connected to ExecuPlanner

A planner task like “Send project update” can be turned directly into an ExecuMail draft.

Supported Tones

Formal

Professional

Friendly

Persuasive

Concise

Apologetic

Example Prompt

“Write an email to my manager requesting a meeting to discuss project priorities.”

The AI generates a subject and body matched to the selected tone and length — ready to edit, save, or schedule.

ExecuRizer

AI-powered meeting transcription and summarization

Features

- Start, pause & stop recording
- Live recording timer
- Speech-to-text (browser speech API)
- Live transcript display
- Upload audio where supported
- Summarize meeting transcripts
- Extract key discussion points
- Extract decisions & action items
- Identify owners & deadlines
- Convert action items to tasks

Review Before You Rely

Transcripts and summaries are AI-generated — owners and deadlines should be confirmed before action items are added to ExecuPlanner.

From Transcript to Task

“John will complete the financial report by Friday.”

Task: Complete financial report

Owner: John

Deadline: Friday

Priority: High

Added directly to ExecuPlanner as a new task

ExecuPlanner

AI-powered task planning, prioritization, and scheduling

Features

- Create, edit & delete tasks
- Assign priority & category
- Add due dates, times & duration
- Set reminders
- View upcoming tasks
- Calendar / schedule view
- Generate daily & weekly schedules with AI
- Prioritize tasks with AI

Priority Levels

Urgent

High

Medium

Low

Task Categories

Work

Meeting

Personal

Admin

Project

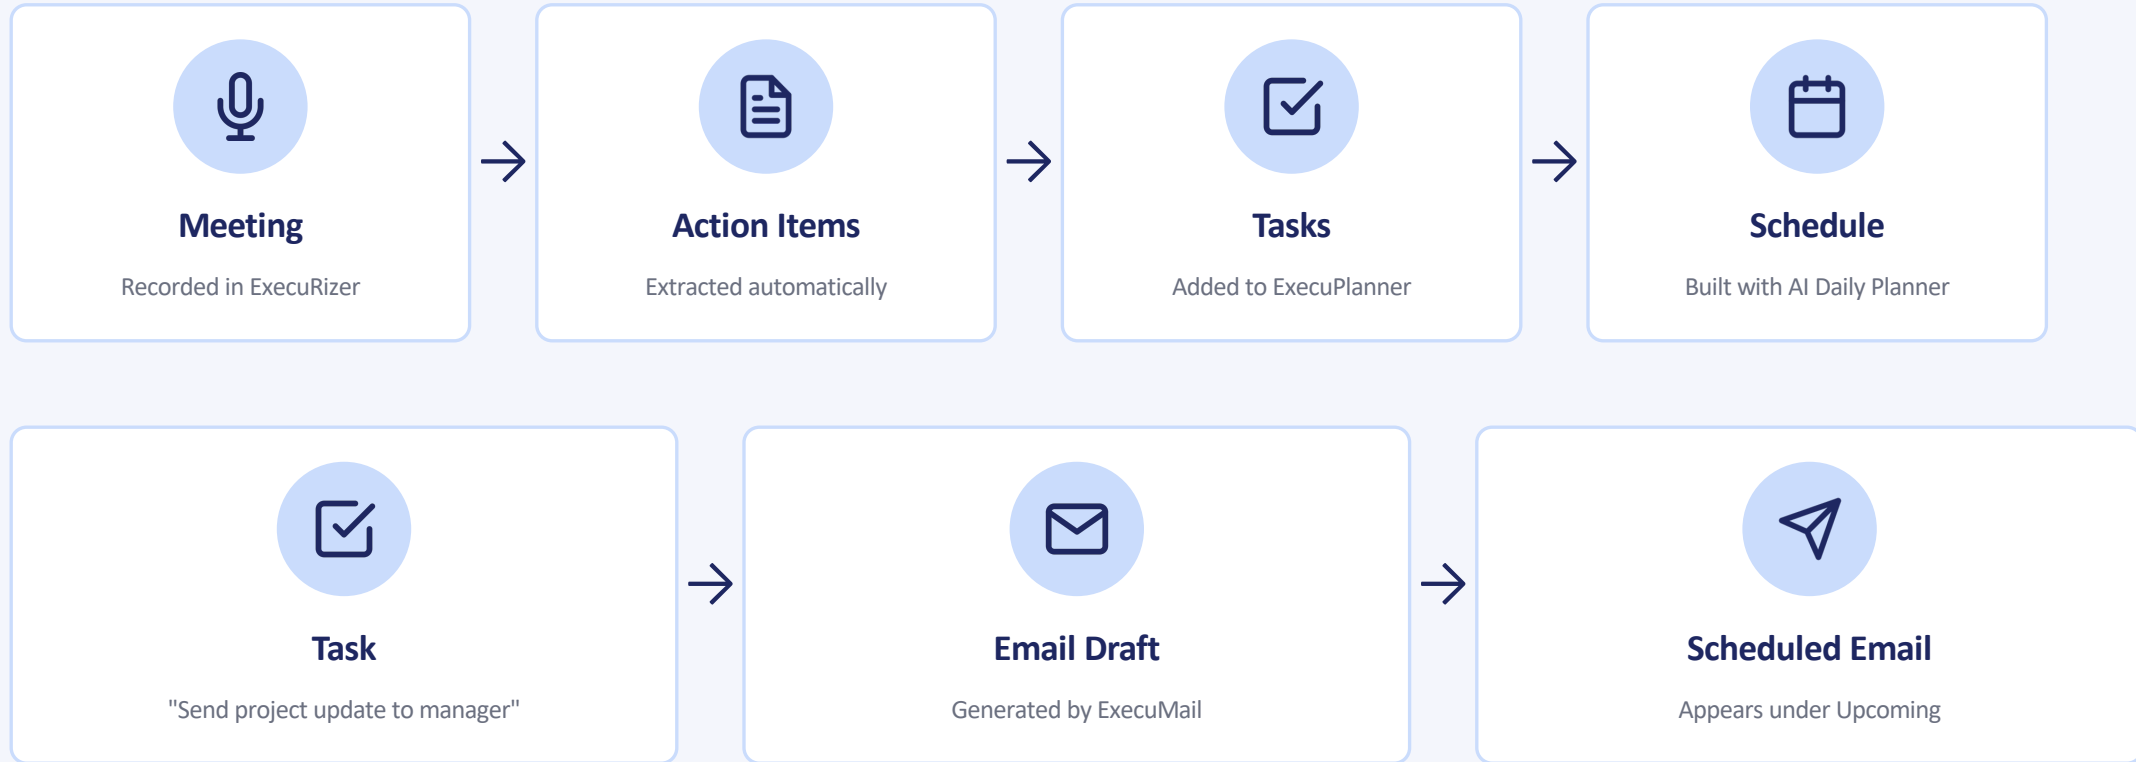

AI Daily Planner

Considers priority, urgency, deadlines, estimated duration, working hours & dependencies to build a realistic, chronological schedule.

One Connected Platform

Modules feed one another — not three isolated tools, but a single productivity ecosystem.

Processed meetings, completed tasks, and scheduled emails all roll up into dashboard productivity statistics in real time.

Responsible AI

AI-generated content may contain errors and should always be reviewed before use.

Human Review

Users remain responsible for final decisions and communications.

Transparency

AI-generated content is clearly identified as AI-assisted.

Privacy Awareness

Users should avoid entering unnecessary confidential information.

Data Minimization

Only information required for the task is processed.

Accuracy Checks

AI outputs should be reviewed before use.

User Control

Users can edit, regenerate, save, or discard AI-generated content.

Disclaimer: AI-generated emails, summaries, transcriptions, schedules, and recommendations may contain errors. Always review before sending, sharing, or acting on them.

Tools & Technologies

The stack used to design, build, and power ExecuSuite AI.

Development

- Bolt.new — AI-assisted app generation
- React — front-end framework
- TypeScript — type-safe development
- Tailwind CSS — styling & UI
- Lucide React — interface icons

AI

- AI API / LLM for generation & summarization
- Prompt engineering for consistent output
- Browser Web Speech API for speech-to-text

Data & Storage

- localStorage — prototype persistence
- Environment variables — secure config

Design

- Modern, responsive SaaS UI
- Card-based dashboard
- Accessible components
- Mobile-first behaviour

Setup Instructions

From Bolt.new prompt to a deployed React/TypeScript application.

1 Create the project

Open Bolt.new, start a new web app, and paste the full ExecuSuite AI application specification.

2 Generate the application

Let Bolt.new scaffold the React/TypeScript app, components, pages, navigation, and dashboard.

3 Install dependencies

Install React, TypeScript, Tailwind, and Lucide React packages for the project.

4 Configure environment

Set environment variables for AI API configuration — never expose keys in client code.

5 Build each module

Implement ExecuMail, ExecuRizer, and ExecuPlanner, then connect them to the dashboard.

6 Test & deploy

Test the full workflow and responsiveness, run npm run build, then deploy to hosting.

Conclusion

ExecuSuite AI demonstrates how multiple AI capabilities integrate into one connected workplace productivity platform — not separate, isolated tools.

Meetings → Action Items → Tasks → Schedules

Tasks → AI Email Drafts → Scheduled Emails

Looking Ahead

- Real email delivery & calendar integrations
- Cloud database & user authentication
- Team workspaces & real-time collaboration
- Analytics dashboard & enterprise security

Work smarter. Plan better. Communicate effortlessly.
